QF-863 Adhesion Promoter

Matrix System's Adhesion Promoter improves adhesion for all paints and can be used on plastic, TPO, SMC, properly prepared cured primers, and OEM coatings.

COMPARABLE TO: Klean-Strip® Bulldog® ETP0123B, Dupli-color® CP199, and Upol® UP8020.

Preparation

Surfaces to receive Matrix System's Adhesion Promoter should be properly prepared, clean, and dry before coating. Wipe surface with isopropyl alcohol, mineral spirits or other no residue cleaner and allow to dry.

Application

Shake can often during application. Apply to thin, uniform coat. When tack-free, apply appropriate Matrix System topcoat. When finished, clear the aerosol can spray valve by turning the can upside down and spraying for approximately 3 seconds. Clean up with methyl ethyl ketone, acetone or acrylic laquer thinner.

Ordering Information

Part Number	Description	Size
QF-863	Adhesion Promoter	12 oz.
