QF-914 Bumper/Trim Black

Bumper/Trim Black provides a durable protective coating and restores the finish on a variety of substrates which include: metal trim and moldings around windows, body sides, bumpers, and rub strips.

COMPARABLE TO: Dupli-color® TP70, and Upol® UP0801 & UP0209

Preparation

Surfaces to receive Gloss Black should be properly prepared, clean and dry before coating. Wipe surface with isopropyl alcohol, mineral spirits or other no-residue cleaner and allow to dry.

Application

When using aerosol cans, hold can approximately 10-12 inches from the surface and press down the actuator to spray. Shake can often during application. Apply thin coats; multiple coats may be needed for full hiding. Allow each coat to dry before applying the next. When finished, clear the aerosol can spray valve by turning the can upside down and spraying for approximately 3 seconds. Gloss may be lower and color lighter under higher humidity conditions. Clean up with methyl ethyl ketone, acetone, or acrylic lacquer thinner.
