QF-840 EZ Blend™ Edge Blender

EZ Blend™ Edge Blender is a ready-to-spray blending solvent used to “melt in” edges for urethane clearcoats. QF-840 is designed to give an invisible blend without causing edge lift. It saves time and labor by eliminating sanding and buffing at the blend edge.

COMPARABLE TO: Transtar® 6363, and Upol® UP2433

Application

Shake well. Apply one mist coat of EZ Blend™ to dry edge of clearcoat immediately after final coat, holding can upright and 8-10” away from the panel. Allow product to flash 2-3 minutes, and reapply if necessary to completely melt in dry edge.

Tech Tip

Use sparingly as over application could result in runs or sags.

Ordering Information

Part Number	Description	Size
QF-840	EZ Blend Edge Blender	12 oz.
